

Every Cigar. Served At Its Peak.

Hospitality Solutions.

Grow sales with our state-of-the-art
operating software application.

One system for better storage, smarter recommendations and stronger cigar sales.

CPFS gives your team access to the science, data and digital tools needed to manage the entire cigar journey, from arrival in the humidor to the final pairing served to the guest.

Powered by PredictorPro, it combines a global blend database, intelligent cross-selling, comprehensive beverage pairing and peak-flavor science in one professional system.

Access A Global Blend Database

Give every member of your team immediate access to detailed blend intelligence across the international cigar market.

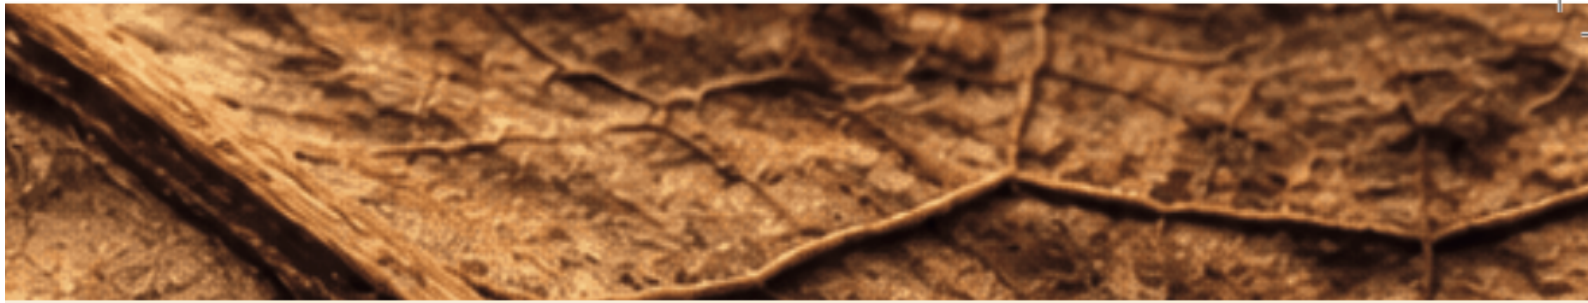

Search by brand, line or blend and understand the tobaccos, origins, construction and sensory architecture behind each cigar, without depending on one individual's memory or experience.

Cross-Sell With Similar Blend Search

When a guest's preferred cigar is unavailable, or when they are ready to discover something new, PredictorPro identifies the closest alternatives based on blend architecture and sensory compatibility.

Guide guests confidently toward comparable cigars already available in your inventory.

More choice for the guest. Better movement across the humidor. More cross-selling opportunities for the venue.

Upsell Through Comprehensive Beverage Pairing

Turn every cigar recommendation into a complete hospitality experience. PredictorPro generates primary and secondary pairing recommendations across: Whisky • Rum • Cognac • Wine • Tequila • Beer • Cocktails • Non-alcoholic beverages. Help your team recommend pairings with confidence, increase beverage attachment and create a more memorable, and more valuable, guest experience.

Unlock Peak Flavor

A premium cigar cannot deliver its intended experience unless it is properly settled, stored and served.

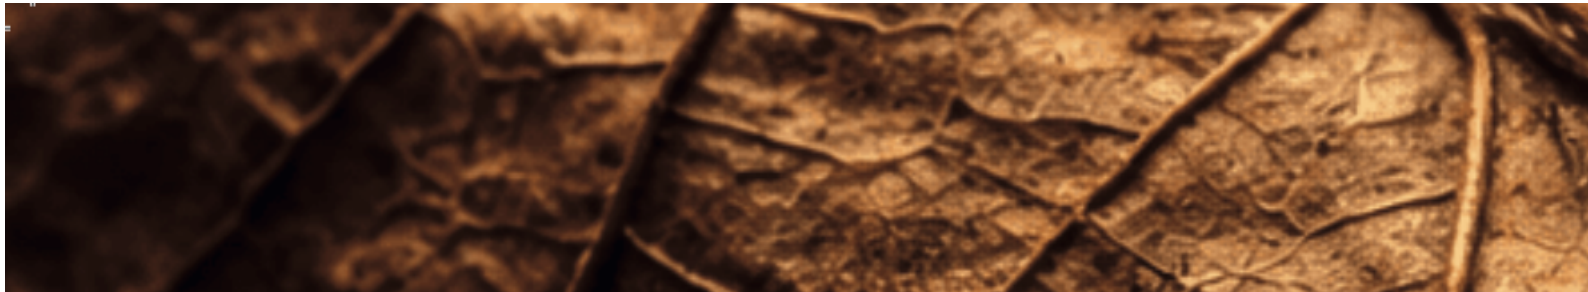

The Cigar Peak-Flavor System® determines:

- The appropriate settling period after transport or environmental change
- The peak-flavor humidity family of each blend
- The correct storage and stabilisation conditions
- When a cigar is ready to be released for service
- The serving condition that supports flavor and combustion performance

Because one humidor setting cannot bring every blend to its peak.

What CPFS Delivers To Your Venue

- Global cigar intelligence available to every authorised team member
- More confident and consistent recommendations
- Similar-blend cross-selling from your available inventory
- Pairing-led beverage upselling
- Better utilisation of slow-moving and alternative references
- Greater protection of valuable cigar inventory
- More consistent flavor, draw and combustion performance
- A repeatable service standard that does not depend on who is working

From Humidor Management To Commercial Performance

CPFS transforms cigar service from individual intuition into a structured, science-based and commercially effective hospitality system.

A controlled implementation, not a software installation

1. Venue assessment
 2. Cigar/Spirits inventory integration
 3. Staff training & certification
 4. PredictorPro go-live
 5. Ongoing sales support
